Identity and Representation in the 2017 Disability March

Accessibility Highlight Video: Headings

Visual description: This video shows a web developer tool that places the HTML alongside a page in the "Identity and Representation" webtext. The narrator indicates with the mouse that the title of the webpage—"Literature Review"—aligns with the h2 tag while the subtitle— "Linguistic Models of Disability"—aligns with the h3 tag.

Transcript: In this video, I will be talking about headings. HTML tags are used in this webtext to denote headings, the purpose of which is to allow readers to navigate from one section to another using an assistive device. In the current layout of the webtext, I don't have many subsections but it is worth noting that specific tags like h1 and h2 are used rather than differentiating titles and subtitles using font alone. Here an h2 tag is used for "Literature Review" while h3 is used for "Linguistic Models of Disability."
