

This is supplementary content for Anderson, "Identity and Representation in the 2017 Disability March," published in *Kairos: Rhetoric, Technology, Pedagogy*, 25(2), Topoi, available at <http://kairos.technorhetoric.net/25.2/topoi/anderson>

Identity and Representation in the 2017 Disability March

Accessibility Highlight Video: Tables

Visual description: This video shows a web developer tool that places HTML alongside a page in the "Identity and Representation" webtext. On the page is a table. The narrator demonstrates with the mouse how the table values have been entered row by row in the HTML.

Transcript: In this video I'll briefly discuss tables and accessibility. When it comes to tables, I've chosen to make my data as "readable" as possible for screen readers. By this I mean that I've tagged each cell in such a way that an assistive device will recognize the contents as data to be read out. I've also captioned each table to provide general context for someone who cannot take in the dataset visually as a whole.
